That said, here's what I think the major benefit of Lightroom 5 is. It's the best indication yet that Lightroom will start to serve as a bridge between the pros and new photographers. Lightroom 5 is fantastic across the board. It does what it should and when it should. It's everything that you want it to be. It also delivers what you expect it to. After all, it came from the same folks who developed Photoshop. If Lightroom 5 does what it should, then you know that it doesn't shoot itself in the foot and spends too much

time making up for lost opportunities. Photoshop is more of a creative weapon. Lightroom could well be the rage of digital photography. Most important, Lightroom still isn't perfect. Adobe let many of us down recently, and Lightroom 5 is the proof positive that they will get back on the right path. For the first time, Lightroom 5 was even compatible with the current (2020) versions of both Photoshop and Photoshop Elements. Once again, a bare bones, understated version of the app. However, Super Sharp Mode has introduced some crazy sharpening effects under the hood. Those alone make this a very worthwhile upgrade. Adaptive Smart Clarity performs better than Photoshop's ICC profiles, and you have to be careful with the Smart Sharpen slider because it can be aggressive. This works much better when in clipping detection mode (like in the capture settings area) because it prevents the sharpening from pushing highlights and shadows around. You also get better tone and saturation. But there's another problem: It doesn't like so much image noise to start off with, the more the better, because darkening the smartest mode will just accentuate the noise. This isn't necessarily a bad thing, but it's a bit jarring if you're not prepared for it.
