What's New in the Nvidia Broadcast?

The best way to reduce the impact of noise and make your audio and video more distinct is to use the audio and video tools that are on NVIDIA's RTX 20 series GPUs.NVIDIA's latest brand-new GPU enables you to use AI-powered technologies to get rid of annoying noise and make the audio and video more distinct. In this way, the videos become more engaging and you'll make the most out of your live-streaming. Description: Video your desktop and get a broadcast-ready experience Turn your webcam or other USB webcam into a broadcast-ready

device with the help of the Nvidia Broadcast application. No need to buy a special camera, no need to install or configure drivers. Just install the application and configure it according to your needs and you are ready to go live. Your broadcast is going to be rich with virtual backgrounds, automatic video zooming, automatic movement tracking and noise removal. All of these features will make your audience feel like they are in a professional broadcasting studio while at the same time feel comfortable and calm during the live session. Description: Enable camera feature on RTX series GPUs With the latest RTX 20 series GPUs, Nvidia enables you to take advantage of the performance and features to create the most professional video and audio content with the least effort. With the ability to take advantage of GPU-powered features, you can create fantastic content on your webcam or any other device that supports Nvidia Graphics. This guide will cover the basics of using Nvidia's NVIDIA's RTX series GPUs to enhance the broadcast experience. Description: NVIDIA's latest brand-new GPU enables you to take advantage of AI-powered technologies to get rid of annoying noise and make the audio and video more distinct. In this way, the videos become more engaging and you'll make the most out of your live-streaming. With the ever-increasing trend of live-streaming content, users are on the search for software to enhance broadcast performance. Audio and video quality, room and camera backgrounds are all contributing to the audience's response and, while not everybody can afford expensive equipment to create a broadcasting studio, there are other ways to make sure the delivered content is high-quality. Aiming to help users benefit from AI-powered technology, Nvidia released the Nvidia Broadcast application. As simple as it might seem, this software utility has the capability to turn regular webcams and microphones into smart devices that can level up live-streaming experiences. Powered by NVIDIA GeForce RTX Before installing, please note that the application requires the latest NVIDIA Studio Driver version installed on

System Requirements:

Microsoft Windows OS (XP, Vista, 7, 8, 10) Intel CPU running at 1.6 GHz or higher 1 GB or more of RAM Graphics card running Windows DirectX 9 or above Minimum 1024 x 768 resolution for VGA mode DirectX 9 Additional Notes: Specify your screen resolution when you launch the game The final release of the remastered version is March 2014, so you'll be downloading the first 8 years of content, through to launch of The Secret of Monkey Island 2.
