Hacks Bypass GameGavel. what is the best skydrive link generator? about us Forum The chief aim of this site is to provide free support by a qualified team of professionals for any general computing problems. We offer free online support for a wide variety of desktop, laptop and mobile gadgets. NIST (Network Information System) uses 16K memory, has a good performance and is designed for data aggregations. It also has a simple interface and a GUI for visualizing the data. It is used by NIST as an automated data point retrieval system. PyNSE is a free version of NIST's product which is designed to organize all the data loaded with an XML-based format. PyNSE can read data from any data source (including Web services) and import data from any format. It supports data annotation through XML-based format. PyNSE also allows the generation of simple reports and the transmission of this data as e-mail.

1. Field of the Invention The invention relates to a method of making an improved diamond tool, and in particular to a drilling tool.

2. Description of the Related Art Diamond tools are commonly made in a grinding process. An initial piece of highly-polished carbide-based material having a drill point is placed in a grinding device. The grinding device grinds the surface of the carbide to form a drill point formed from diamond powder. Prior art methods use a rotating drum having a surface through which the

carbide passes during the grinding. Another prior art process utilizes a surface which rotates in a first direction, causing the carbide to pass over the surface. A second surface, which is rotated in a second direction, causes the carbide to pass over the surface. Because the two directions are different, the process is referred to as a Roto-Planar device. Although in the prior art, the two surfaces are rotated in different directions, both surfaces rotate through the carbide. As a result, the carbide is ground on two surfaces simultaneously. In the prior art, the surface through which the carbide passes during the grinding is circular. Therefore, the process is limited to polishing point-like drill points. The process is not well suited for grinding a cylindrical component. U.S. Pat. No. 5,756,020 to Glenn, entitled "Ductile Metal Heat S
