Smart Sharpen uses up to four smoothing modes to determine the optimal edge enhancement process based on alignment, contrast, and noise. Begin with a liquid or solid edge, then move to the Rx, Sx, Hx, or Vx mode to adjust the amount of enhancement. The Results panel shows up to four effects you can apply. Once you're done adjusting the Smart Sharpen settings, simply press Alt+Enter to apply them. The Settings icon lets you choose from three Sharpening Presets: Unsharp Mask, Sharpen, or None. Pair Crop lets you apply several crop layers with different alignment effects. With a base layer, you can adjust the position and size of the crop area, and Crop can apply a layer mask that combines and tile multiple images into one. Layer Masks let you protect layers from moving, copying, or pasting while you work on the rest of your image. To apply a layer mask, first select the Layer Mask icon in the Layers panel or by pressing Alt+click on a layer's thumbnail in the Layers panel. From the Layer Mask dialog box, move the layer you want to protect into the mask by selecting it, and then determining whether to protect its movement, copying, or pasting. If you want to step outside the mask to change your selection, deselect the layer first to remove it from the mask.
